

# Sustainability Report 2020

Contributing to a sustainable and circular society is crucial to all of us. A healthy society is the basis for a healthy economy and we as Electroplast want to take our responsibility to develop in this direction. Therefore, we establish sustainability targets every Year and develop a dialogue with our stakeholders.

Our basic goals are:

- Protect the climate and conserve resources.
- Strengthen environmental awareness.
- Promote social and environmental commitment.
- Pay attention on safety and health of our employees.

To meet these basic goals, we agree on specific target every Year. We reached our targets for 2020 and we want to inform you about the biggest achievements:

- All our packaging materials – all boxes and plastic bags – now are produced with 100% recycled material.
- Based on process changes we could reduce our resin waste by 45%.
- Our direct carbon dioxide emissions within the company could be reduced dramatically. We stopped our oil-based heating in all our buildings and installed a heat recovery from the production process. With this investment, we could reduce our direct CO<sup>2</sup> emission by 110.000 kg per Year. The system is running since Winter 2020 and the overall success is overwhelming. Not only could we completely stop our oil consumption, but we also improved the convenience of the heating for our employees.
- Based on our energy saving program, we reduced the electrical energy/kg by 15%

We will keep going in this direction also in 2021 and we will keep you informed about the results!
